

1. (a) Estimate the calculation and cross out the answer that must be wrong.

Calculation	Estimate	Possible answers
31×26		806 66
4.8×9.1		3.68 43.68
29.3×8		234.4 232.4
$196 \div 12$		28 18
$28.8 \div 9$		3.2 32

- (b) Use a calculator to find the actual answer. Tick the other possible answer if it is correct and cross it if it is wrong.

2. One of the two possible answers is correct. Do not try to work out the answer.

Ring the answer you think is more likely to be correct and write your reason why.

Calculation	Possible answers	Reason
$10\ 078 + 26 - 132$	882 9972	
$4.6 + 7.5 + 8.3$	20.6 20.4	
$(343 - 138) \div 5$	41 4.1	
42.3×3.6	162.25 152.28	
$123.54 \div 6$	20.59 2.59
